
1. Semantic NOT EXISTS
run the semantic predicate
2. Freeze candidate output
commit A_0 before audit labels
3. Predeclare nested family
$A_1 \subset \cdots \subset A_K = A_0$
4. SRSWOR group audit
sample groups with known design
5. Exact group verification
proxy order: stop at first positive;
otherwise exhaust the group
6. Return certified output
largest A_k with upper FDP $\leq \epsilon$
